P.O. Box 23001, Paterna, Valencia, 28204, Spain, which is probably Latin America's second best videogame company, after Ubisoft.), the company responsible for the anime website Zetaboards, the Cartoon Network website CartoonMundane.com, the anime website AnimeCritic.com, the Chinese website XuanNet, the anime website Project-Anime, and a variety of free-to-play browser games. Games Upcoming games References External links Flashpoint FlashpointMemo to Bezos: Amazon can't magically make products stickier I actually haven't made my way through "The Everything Store," but I think I have enough of an idea. It's a thorough and fascinating book that chronicles the meteoric rise of Amazon, Inc. in the early days of the web. In the book, author Brad Stone notes that Amazon was making \$200 million in 1998, a "disaster" year. That would have been the low point for the company. Amazon's valuation at that time was \$180 million. The company did not have much competition, so they were able to charge a high price for books and other inventory. (Who remembers the days of Blockbuster Video? I'm old.) Amazon was growing so fast that if it offered its services at a lower price than its competition, it would have a hard time pulling it off. But then a couple of things happened. The first was that the market for books changed dramatically. It used to be that people who really wanted to read a book would order it from the library, but now they could buy it at the local bookstore. People who did buy books on a regular basis no longer needed a rental service. As libraries were forced to shut down their rental desks, Amazon was given the task of running them. The second thing that happened was that Apple Inc. began to incorporate books into its iPod lineup. That meant that not only could people listen to their music on the go, but they could also listen to books on the go. Amazon discovered that if it made its customers even more mobile, it could make even more money, as people became more likely to buy items from it on the road. It seems to me that Amazon's greatest value is in its technology — its robust technology platform that can be used f3e1b3768c
