A: You are looking for a calculator using a procedure which looks like: Choose the radio. Click the button on the right side of the window, which is used for the calculation. (In your case "Scan" and "Calc"). Q: Hibernate custom property doesn't work when there is more than one path I'm using Hibernate 5.0.3 in my project. When I use my custom property(a complex data structure) as BIC attribute or STRING attribute, it works well. But when I use my custom property in path such as "(bic: 'xyz')", the property becomes null, however, if I use a literal instead of my custom property, it works well: String source = "bic: 'abc'"; So my guess is that Hibernate didn't map my property so that the column is still null, even though I put a valid path. Anyone knows the answer? Thanks in advance! A: You are right, that's why with String attribute hibernate simply creates an alias on target table, but with custom property, hibernate create a column on target table. Thus, because of the column is null and a value on null, it fails. Q: Let $f(x) = \int_{0}^{x} \frac{1}{x-t}dt$. Show that $f(x) = \ln{x} + c$ So I have this integration problem and am not really sure what I should do. It says let $f(x) = \int_{0}^{x} \frac{1}{x-t}dt$ and show that $f(x) = \ln{x} + c$ for some constant c. We assume that $x > 0$. I am stuck on this problem, this is what I have done. 1) Let $F(x) = \int_{0}^{x} \frac{1}{x-t}dt = \ln\frac{x}{t} + C_{1} = \ln{x} + C_{1}$ so $C_{1} = \ln{x}$ 2) Let $g(t) = \frac{1}{x-t} = \$ d4474df7b8
