We are working to resolve the issue and will send you an email notification once the code is back online. Please check your Spam folder if you don't receive the email within a few minutes. We apologize for any inconvenience. Verify that the correct version of Windows was selected (For example, Windows 8 is not compatible with versions of Windows before it). Verify that the update is applicable for the correct OS and version. Try downloading and installing this update on a different PC that has not been updated recently. This action can be used to resolve some compatibility issues.Q: How do I write a time-series vector to an HDF5 file in pandas? I am trying to make a time series in pandas that contains datetime64[ns] objects, however HDF5 (h5py) seems to want only dtype objects (specifically float64). So I attempted to add a float64 column to the dataframe as follows: df['date'] = pd.to_datetime(df['datetime64[ns]']).dt.date df['date'].head() How should I write a datetime64[ns] object to an HDF5 file? A: I think in pandas 0.19.1 there is new function pd.HDFStore.to_hdf which accepts type to store (string/list, list/string, string/dataframe, dataframe/string). But I've got a problem with creating date column with pytables and pandas together. I can't make it work. First I get whole dataframe from hdf5 file to numpy and then pass it to pytables: import pytables import pandas as pd # Note: I am on windows, # so different path of hdf5 file for you may be different df = pd.read_hdf('C:/Users/david/Desktop/Data/foo.h5') numpy.save('foo.npy', df) table = pytables.Table.open('foo.
