Air pollution can alter your blood vessel function and cause cardiovascular disease, according to the American Heart Association. When your body doesn't have enough oxygen it uses certain proteins in your blood to protect the heart and brain from damage caused by lack of oxygen. Small red blood cells with oxygen-carrying proteins in them (called haemoglobin) are unable to travel as far as small blue blood cells that do not have oxygen-carrying proteins (called myoglobin). This is referred to as haemoglobin-myoglobin dissociation, or the Bohr effect. What is the connection between air pollution and the Bohr effect? There are many common sources of air pollution, including traffic, waste burning, power plants and industry. Most of these pollutants have been associated with decreased haemoglobin-myoglobin dissociation, causing blood to carry less oxygen. Recent studies have looked at the association between air pollution and the Bohr effect. For example, a study conducted in an area where air pollution was high found that air pollution was associated with a decrease in haemoglobin-myoglobin dissociation. Once upon a time, all a programmer had to do in order to create a program was to follow a line of instructions, write it down, and then write it down again. At the end of that process, they would have a working program. Today, things have gotten more complicated. With multiple platforms and operating systems, programs have to be specifically tailored for each different environment, and different programmers need to account for differences that affect code: syntax, language, indentation, character sets, etc. Additionally, programming itself is now done much more quickly and efficiently. Thus, programmers have to come up with new ways of organizing their thoughts, in order to keep up with all of the tools they are using. This is where the “software engineer” comes in. One such tool that allows you to organize your thoughts and make your coding process easier to follow is the software engineer’s program, commonly referred to as a mind map. Mind maps allow you to have a program that you can follow, and which can keep your thoughts organized. In this post, we’ll go over how to create your own mind map program using the free product called FreeMind. We will be using FreeMind to create a simple example map. The steps are very similar to the steps used to create any other program, so we’re going to assume that you know how to set up the basics of a program. We’re going to start off with a new blank project, choose to use a main file and then set the other options up to match. We’re going to use the FreeMind Core
