Martin 039;s Calculator Download

What's New In?

Martin's Calculator is a Java-based instrument that can be used to solve various math calculations. Limitations: The Calculator uses the embedded Java implementation of the standard Java Virtual Machine, and so it does not support Java applications running outside the embedded Java virtual machine. What's new in 3.0.0.1: - Bug fixes What's new in 2.2: - Fixed a problem with the Help button What's new in 2.1.5: - Fixed problems with game record mode What's new in 2.1.4: - Fixed a bug with double quotes What's new in 2.1.3: - Fixed a problem with the input field for decimal numbers - Fixed a problem with program memory - Fixed a problem with the "Preferences" button What's new in 2.1.2: - Fixed a problem with the input field for decimals What's new in 2.1.1: - Fixed a problem with the input field for hexadecimal numbers What's new in 2.1.0: - Added the decimal (0-9) button to the input field - Added the hexadecimal (0-9, A-F) button to the input field What's new in 2.0.9: - Added the flash-based virtual machine - Fixed a problem with the opening of an existing application What's new in 2.0.8: - Fixed a problem with the input field for octal numbers What's new in 2.0.7: - Fixed a problem with the input field for binary numbers - Fixed a problem with the search field What's new in 2.0.6: - Fixed a problem with the input field for hexadecimal numbers What's new in 2.0.5: - Fixed a problem with the input field for decimal numbers What's new in 2.0.4: - Fixed a problem with the input field for binary numbers What's new in 2.0.3: - Added the actual input field - Fixed a problem with the input field for hexadecimal numbers What's new in 2.0.2: - Added the decimal numbers button - Fixed a problem with the search field What's new in 2.0.1: - Fixed a problem with the input field for decimal numbers What's new in 2.0.0: - Fixed a problem with the "Preferences" button - Fixed a problem with the help button - Fixed a problem with the search field
