* **Photoshop CS:** Version 6.0 and newer * **Photoshop CS3:** Version 8.0 or newer * **Photoshop Elements:** Version 6.0.6 or newer * **Photoshop Lightroom:** Version 1.5 or newer ## Lightroom This is a digital camera and RAW (red green and blue) processing application. Lightroom automatically converts the RAW images to Adobe RGB (also called monitor RGB) to ensure maximum compatibility for viewing. Lightroom has a very intuitive interface and enables simple image editing including adjusting exposure, cropping, light and color adjustments, touch-up enhancements, converting images to black and white, and more. Lightroom can import and manage JPEG images and can also process RAW files on your computer. You can import a folder full of files (just drag and drop the files from your computer onto the application window). Lightroom makes RAW files available for immediate editing (if you have a suitable computer for processing RAW). Lightroom is good for people who take digital photography seriously. I've seen images that my friends took, only to find after I downloaded them that they were awful because Lightroom hadn't converted them to RGB and the image was too dark. Lightroom lets you import a set of images at once, which is great if you are importing a lot of images from a vacation or event. With Lightroom, you can create an action that automatically processes each image in a given folder at once. Actions can be set up with checkboxes or menus that automatically process a group of images. Lightroom is easy to use, but it has some learning curve. There are some excellent tutorials that explain more than you could ever want to know about Lightroom. Adobe Lightroom is different from Photoshop and Photoshop Elements because it was not developed with the idea of giving non-professionals the ability to manipulate images. Lightroom is more about creating the best-looking images possible. However, it does have some excellent tutorials on the market that can help you if you want to create your own actions. Lightroom can use a great variety of plugins for image enhancement. There is support for some of the most popular RAW processing plugins, such as i1, Capture One Pro, Nik Color Efex, and Sony Camera RAW. Lightroom can import and edit RAW files from a wide variety of digital cameras, including Canon, Nikon, and Sony.

What's New In?

Italian export, the '€'pegged pound'down By Ben Wright 6 July 2011 Italian exporters are experiencing a renewed bout of export-driven inflation. The Italian government introduced record-high import tariffs on car parts in April 2011. The move has raised prices on products exported from the EU, including rubber, metal, plastics, mechanical components, among other things. These non-food imports, particularly from eastern Europe and China, account for more than 30 percent of Italy's total merchandise imports. Italians have been prohibited from exporting goods and services to the EU market for years. Now, with the invigoration of the currency markets with a drop in the value of the pound, export income has shrunk. In a matter of weeks, firms began exporting domestic products to the EU market. And, while exports have been boosted in recent months, the tariff increases mean that companies that rely on consumer goods for their exports have slashed prices and raised their margins. These price increases must be reflected in consumer prices, which are now rising faster than wages. At the same time, economists and politicians have declared that the government's price hikes are necessary. Sergio Mattarella, the Italian president, has insisted that the previous Conservative government increased prices on car parts because it was engaging in a policy of "export or die." The new Socialist government, headed by Prime Minister Mario Monti, has stated that the price hikes in goods that the previous government had already planned were too small. Monti declared: "The [previous government] has thought of the economy, of exports, of the one percent, of the 10 percent." Monti's argument is, in fact, in disagreement with reality. The budget deficit has reached 10.4 percent of GDP, the highest it has ever been, and the government is forced to impose a series of price hikes on consumers for the foreseeable future. This is the first time in recent Italian history that serious fiscal problems have been faced. The crisis was triggered by the global financial crisis of 2008. The previous government attempted to shift the burden of the global recession onto domestic populations by imposing an array of austerity measures and, now, these measures are combined with a series of exorbitant price hikes. In response to the sharp drop in Italian inflation from 6.2 percent in March to 5.7 percent in April,
