SolidFTP Server is a handy application designed as a FTP server that features built-in IP filtering, bandwidth throttling, resume support. Choose authentication style from Windows Authentication or XML users database. SSLV3 support. Global and Userlevel Bandwidth Throttling The IP Filtering section allows to block additional IP

addresses. You can use it to block bruteforce attacks and actively scan hosts. Built-in IP Filtering can block several IP addresses at once. Virtual IP range is 4-digit number only. The numbers separated by - is the number of blocked IP address. The user must get the IP address from DNS Cache for accuracy. The XML users database allows you to use the users that you have defined in the FTP Server itself. The Global Bandwidth

Throttling allows to control bandwidth usage by users. This bandwidth throttling works by counting the number of accepted connections of each user. Users with bad connections will be throttled just for the time of the bad connection. SolidFTP Server provides connection limits to limit the number of active connections per user. Supports Linux User Shell. Use MS Exchange Active Directory Server (RDS) to store the

credentials. Batch process downloads or uploads with file size limits to block bots. Resume support. SSLV3 support. Whether to save the password or not. For Windows 10 Configure and backup the server using Azure, Azure Backup or Azure Site Recovery Download the Live Update from the Microsoft web site Copy the downloaded MSI and run it Enter "YES" into the "Save Password in Secure Storage" preference SolidFTP
